

ZOOZOO PRINTING

SETUP GUIDE

DIELINES

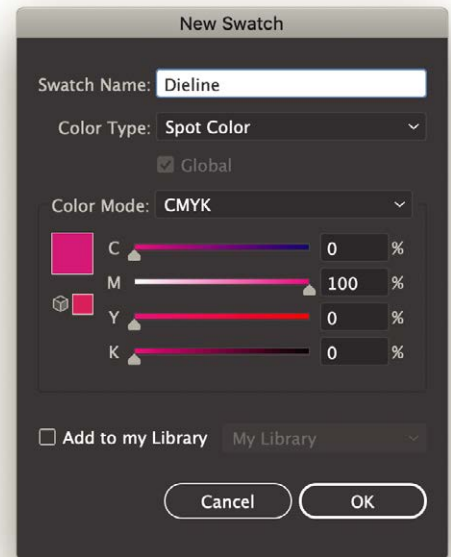

For products that require forme cutting such as wobblers, presentation folders or custom orders, two separate files must be supplied. The first file should have the artwork including the dieline and the second file with the artwork only.

- 1 To save your artwork with the dieline (if not already using one of our pre-made templates), open your artwork. Ensure all artwork includes at least 5mm bleed.
- 2 Set the shape as a spot colour, if you have not already. You can do this by creating a new swatch. **Change colour type to 'Dieline'** and set the Magenta value to 100%. Ensure both fill and opacity settings are also set to 100%

It is **IMPORTANT** to make sure the position of the artwork is exactly the same in both files.

AVOID keeping important elements such as text and images close to the edges of the dieline.

File 1 | Artwork with Dieline

File 2 | Artwork Only

Dieline placed on a separate layer
